## Peels

### Chemical Peels

Depending on the skin type and scar to be treated, a superficial, medium, or deep chemical peel may be recommended. In addition to removing the top layers of the epidermis, chemical peels are noted for their ability to stimulate collagen synthesis and aid in the production of new skin cells. Depending on the type of peel, multiple treatments may be required.

### Microdermabrasion

Microdermabrasion is a non-surgical, exfoliating treatment helpful for those unhappy with scars, acne scars, sun-damaged skin, pigmentation spots, stretch marks, fine lines, and rough skin. Treatment can be performed anywhere on the body. This treatment works for scarring, especially when used in conjunction with other modalities.
